

CALL FOR PAPERS

QCS 2027

ACM SIGARCH International Conference on Quantum Computing and Systems

June 10–11, 2027 | **Atlanta, GA, USA** | Co-located with ACM FCRC 2027

As quantum computing advances toward practical, scalable systems, innovation across the whole computing stack is essential. QCS brings together researchers and practitioners working where quantum computing meets **systems, architecture, programming languages, design automation, and HPC**. We especially encourage work that bridges layers of the stack, co-designing algorithms, software, architectures, and hardware.

Topics of Interest

- **Quantum Algorithms & Applications**
  algorithm engineering, optimization, quantum ML
- **Architecture & Systems Co-Design**
  hardware-software co-design, resource estimation
- **Compilers & Design Automation**
  synthesis, mapping, scheduling, FT compilation
- **Quantum Software & Runtime Systems**
  programming models, middleware, cloud QC
- **Hybrid & Distributed Computing**
  quantum accelerators, networking, HPC integration
- **Fault-Tolerant Quantum Computing**
  QEC, FT architectures, cross-layer co-design
- **Modeling & Evaluation**
  simulation, benchmarking, reproducibility
- **Full-Stack Quantum Systems**
  cross-layer optimization, utility-scale QC

IMPORTANT DATES

Abstract deadline	**January 15, 2027**
Full paper deadline	**January 22, 2027**
Author notification	**March 8, 2027**
Conference	**June 10–11, 2027**

SUBMISSIONS

Up to **10 pages**, excluding references

Double-blind review of previously unpublished work

Accepted papers are presented in person and appear in the **ACM Digital Library**
